Abstract. The enormous public health impact of adolescent substance use and its preventable morbidity and mortality highlight the need for the health care sector, including pediatricians and the medical home, to increase its capacity regarding adolescent substance use screening, brief intervention, and referral to treatment (SBIRT).

This study of the Tennessee Voluntary Pre-K Program (VPK) is the first randomized control trial of a state

pre-k program. Positive achievement effects at the end of pre-k reversed and began favoring the control children by 2 nd and 3 rd grade.. VPK participants had more disciplinary infractions and special education placements by 3 rd grade than control children.

Effects of the Tennessee Prekindergarten Program on

An electronic health record (EHR), or electronic medical record (EMR), is the systematized collection of patient and population electronically-stored health information in a digital format. These records can be shared across different health care settings. Records are shared through network-connected, enterprise-wide information systems or other information networks and exchanges.

Electronic health record - Wikipedia

Students who participated in an intensive childhood education program from preschool to third grade were more likely to achieve an academic degree beyond high school, compared to a similar group that received other intervention services as children, with greater benefits for those whose mothers were high school dropouts.
