A process VM, sometimes called an application virtual machine, or Managed Runtime Environment (MRE), runs as a normal application inside a host OS and supports a single process. It is created when that process is started and destroyed when it exits. Its purpose is to provide a platform-independent programming environment that abstracts away details of the underlying hardware or operating ...

The output on different platforms can vary a bit (check the man pages to find out more on a particular version), but the key information given is the class of each symbol, and its size (when available). The class can have a number of different values: A class of U indicates an undefined reference, one of the "blanks" mentioned previously. For this object, there are two: "fn\_a" and "z\_global".
