The Integrated Design Process The Integrated Design Process (IDP) has been developed on the basis of experience gained from a small Canadian demonstration program for high-performance buildings, the C2000 program. This program was designed in 1993 as a small demonstration of very high levels of performance,

### **The Integrated Design Process - iiSBE**

In general, the integrated design process is an approach to building design that seeks to achieve high performance on a wide variety of well-defined environmental and social goals while staying within budgetary and scheduling constraints.

### **ROADMAP FOR THE INTEGRATED DESIGN PROCESS**

The Integrated Design Process (IDP) is a method of intervention in early stages of the design process that supports the development and design team to avoid sub-optimal design solutions.

survey results, OSD published the DoD Guide to Integrated Product and Process Development (Version 1.0), dated February 5, 1996 (hereinafter called the DoD Guide to IPPD). The DoD Guide to IPPD was developed to provide a general understanding of DoD's perspective on IPPD.

The integrated delivery process allows the designer to benefit from the early contribution of constructors' expertise during the design phase, such as accurate budget estimates to inform design decisions and the pre-construction resolution of design-related issues resulting in improved project quality and financial performance.

4 1 Integrated Process Design 3. Select a good base case. Determine a consistent material balance. Improve the design by using process - integration techniques. Determine targets for utilities, water and mass - separation agents. Set performance targets for the main equipment. Optimize the process flow sheet. 4. Perform equipment design.

INTEGRATED DESIGN PROCESS GUIDELINE KEY STATEMENTS The frequently-heard call for increased building quality at lower cost cannot be answered except through the use of integrated design approaches. Correlations between economy and ecology need to be linked with future social responsibility and sustainability by a long-term project consideration.

BOX 3.1 An Example of Information Technology-driven Integrated Product and Process Design. In the semiconductor industry, electronic computer-aided design (CAD), also called electronic design automation, is a good illustration of how information technology can support the integrated product and process design process.
