Welding Equipment - Machines and Gear | MillerWelds

Arc welding is a welding process that is used to join metal to metal by using electricity to create enough heat to melt metal, and the melted metals when cool result in a binding of the metals. It is a type of welding that uses a welding power supply to create an electric arc between a metal stick ("electrode") and the base material to melt the metals at the point-of-contact.

Gas metal arc welding (GMAW), sometimes referred to by its subtypes metal inert gas (MIG) welding or metal active gas (MAG) welding, is a welding process in which an electric arc forms between a consumable MIG wire electrode and the workpiece metal(s), which heats the workpiece metal(s), causing them to melt and join. Along with the wire electrode, a shielding gas feeds through the welding gun ...

Quality Control System Manual For ASME CODE SECTION VIII

Soldagem TIG (sigla em inglês de Tungsten Inert Gas) é um processo de soldagem a arco elétrico entre um eletrodo não consumível de tungstênio e a peça de fusão com proteção gasosa, sobre a qual faz-se o acríscimo ou não de um metal de adição, normalmente na forma de um arame relativamente fino. O processo também é conhecido em inglês como Gas Tungsten Arc Welding ().

Soldagem TIG é “ Wikipédia, a enciclopédia livre

Welding & Cutting Hazards Welding and Cutting operations present a variety of hazards, not only to those carrying out the operation but in many instances to others in the vicinity. In the workshop there are a number of hazards specific to welding or cutting and others, of a more general nature, which may also be present in the fabrication environment.
